General information

	Indicator definition	All clinical sites 2019		
		Median	Range	
Numerator	Primary cases (elective patients: pre-intervention, emergency patients: post-intervention) who were presented in the tumour conference	172*	74 - 588	9,366
Denominator	Primary cases (= Indicator 1)	184.5*	109 - 607	9,914
Rate	Target value ≥ 95%	96.81%	39.36% - 100%	94.47%**

Basic data indicator:

The definition of the numerator, denominator and the target value are taken from the indicator sheet.

The specification of the median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

Under Range, the value range for the numerator, denominator and ratio of all centers is specified.

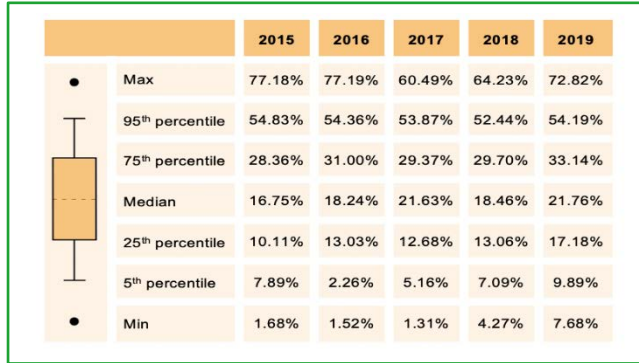

The Total Patients column displays the total of all patients treated according to the indicator and the corresponding quota.

Diagram:

The x-axis indicates the number of Centres, the y-axis gives the values in percent or number (e.g. primary cases). The target value is depicted as a horizontal green line. The median, which is also depicted as a green horizontal line, divides the entire group into two equal halves.

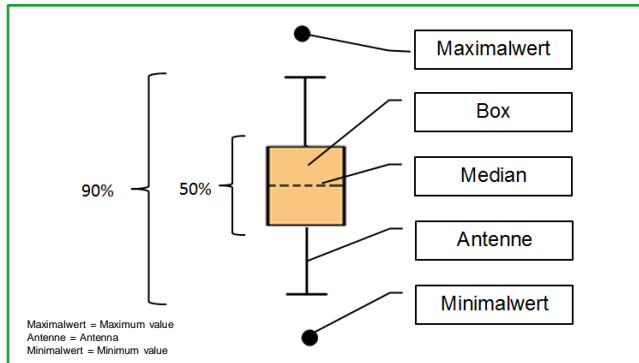

General information

Cohort development:

The **cohort development** in the years **2015, 2016, 2017, 2018** and **2019** is presented in a box plot diagram.

Box plot:

A box plot consists of a **box with median, whiskers** and **outliers**. 50 percent of the Centres are within the box. The median divides the entire available cohort into two halves with an equal number of Centres. The whiskers and the box encompass a 90th percentile area/range. The extreme values are depicted here as dots.

*The figures are based on the clinical sites listed in the Annual Report.

This annual report looks at the neuro-oncological centers certified in the certification system of the German Cancer Society. The basis for the diagrams in the annual report is the data sheet.

The annual report includes 44 of the 47 certified center locations. Excluded are 3 sites that were certified for the first time in 2020 (data mapping of the complete calendar year is not mandatory for initial certifications). In all 47 sites 10278 primary neuro-oncological cases were treated. An up-to-date overview of all certified sites is available at www.oncomap.de

The indicators published here relate to the indicator year 2019 and provide the basis for the audits conducted in 2020.

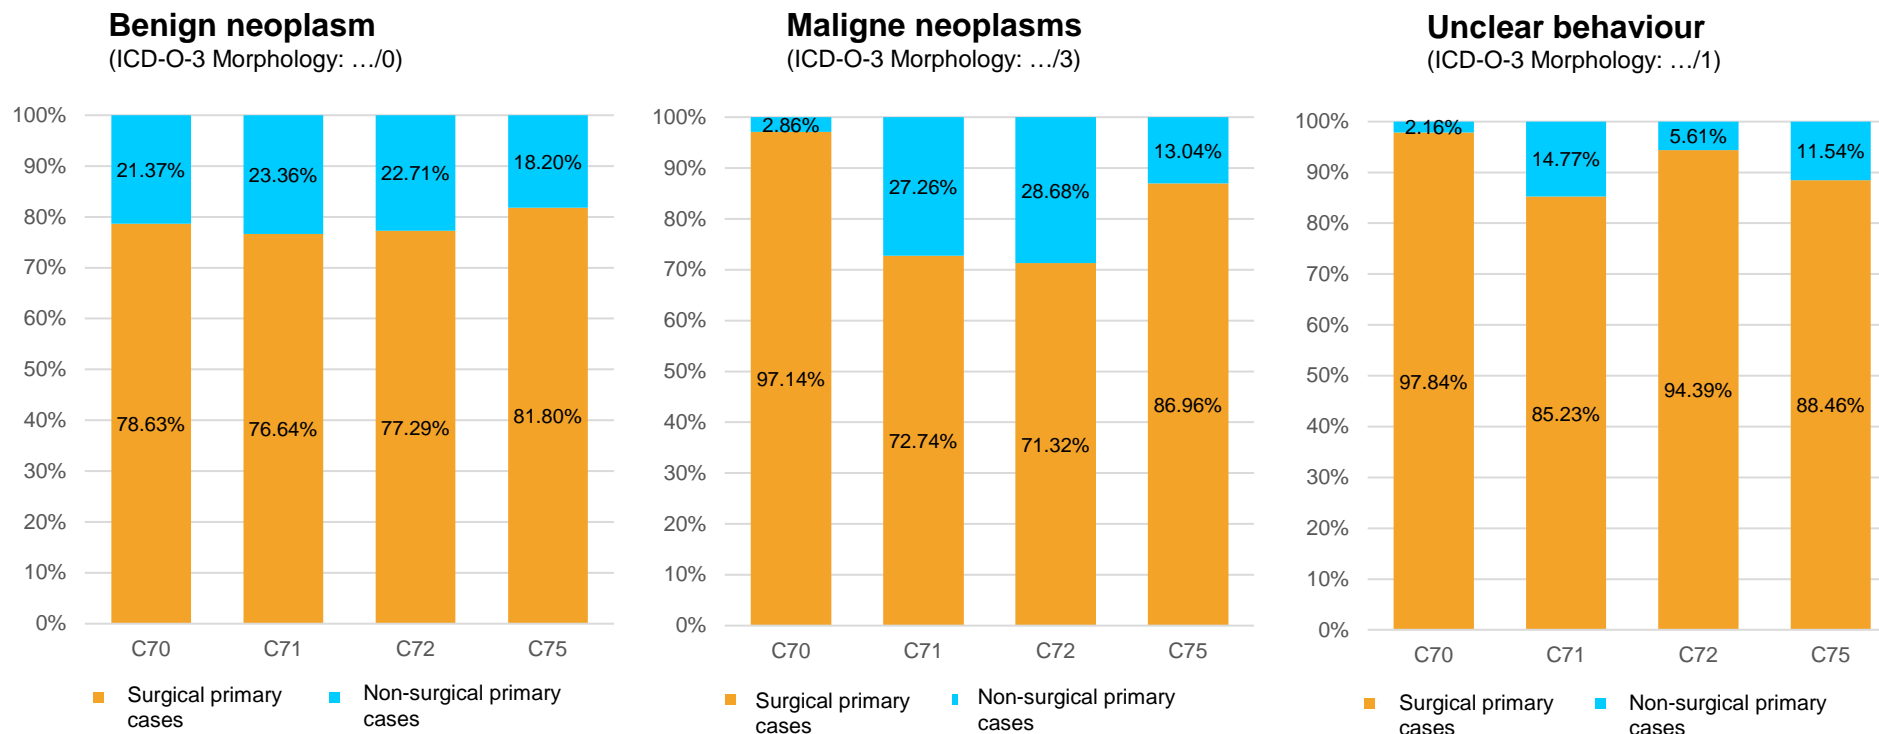

Tumour documentation systems in the Centre's clinical sites

Andere = other
Eigenentwicklung = intrinsic development
Tumorzentrum = tumour centre

The information on the tumour documentation system was taken from the data sheet (Basic Data Sheet). It is not possible to specify several systems. In many cases, support is provided by the cancer registries or there may be a direct link to the cancer registry via a specific tumor documentation system.

Comments:

All centres achieve the target of at least 100 primary cases. A total of 9,384 primary cases were treated in the German centres. Overall, the number of primary cases treated in certified centres (also outside Germany) increases by 7.13% compared to the pre-indicator year.

2. Interdisciplinary case reviews

Rate

	Indicator definition	All clinical sites 2019		
		Median	Range

Clinical sites with evaluable data		Clinical sites meeting the target value	
Number	%	Number	%
44	100.00%	36	81.82%

Comments:

The presentation rate in the tumour board continues to increase at a high level. Only 8 centres (previous year: 10) failed to meet the target of at least 95%, which was mainly due to organisational problems (e.g. SOP not followed) and missing processes for the post-interventional presentation of emergency patients. The auditors worked on adjustments to the processes (e.g. through training, SOP) and issued a remark if necessary.

*The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

3. Psycho-oncological care

Rate

Clinical sites with evaluable data		Clinical sites within the plausibility limits	
Number	%	Number	%
44	100.00%	41	93.18%

Comments:

The overall attendance rate has increased slightly compared to the previous year. Also, only 3 centres (previous year: 4) are still below the 10% limit, which goes hand in hand with an obligation to provide consultation. The centres concerned referred to staff shortages, a high proportion of benign findings with a correspondingly low need for counselling, as well as consultations with external psychooncologists. The centres reacted by increasing staff, approaching patients more often and better integrating their own and external psychooncologists.

The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

*** For values outside the plausibility limit(s), the centers are required to provide a justification.

4. Counselling social services

Rate

Clinical sites with evaluable data		Clinical sites within the plausibility limits	
Number	%	Number	%
44	100.00%	42	95.45%

Comments:

Social work counselling services are very well implemented in the centres. The two centres below the 30% limit fall just short of it. Both could not name any concrete reasons for the comparatively low counselling rate, but announced more intensive efforts to offer low-threshold counselling.

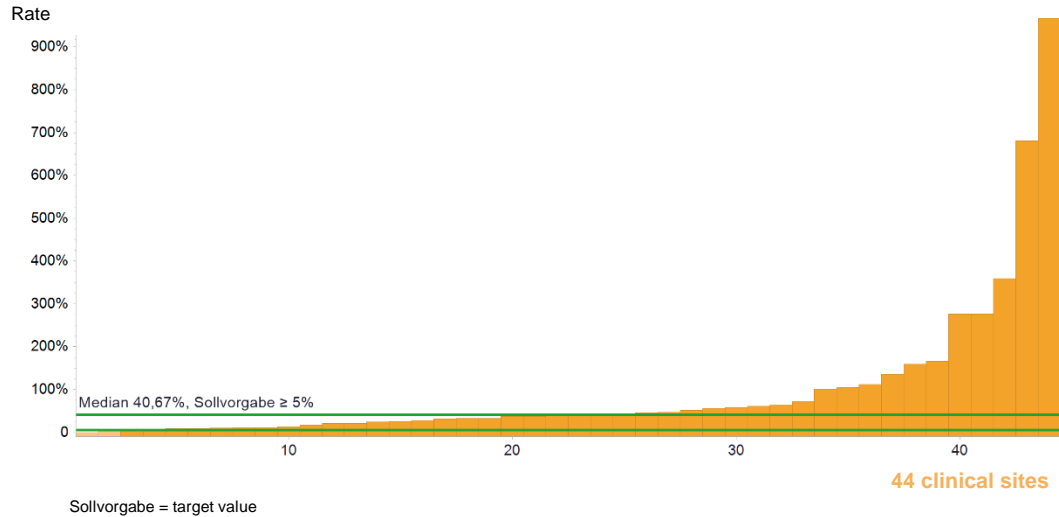

The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

*** For values outside the plausibility limit(s), the centers are required to provide a justification.

5. Study participation

Clinical sites with evaluable data		Clinical sites meeting the target value	
Number	%	Number	%
44	100.00%	42	95.45%

Comments:

The overall study quota has risen further, which is mainly due to individual centres with extraordinarily high values. Two centres (previous year: one) failed to meet the target of at least 5% study enrolment measured against the number of primary cases. In one case, a planned study was delayed in starting. The centre with a quota of 0% initiated its own study, for which, however, the ethics vote was still pending. In the audits, both centres expected significantly higher rates in the following year. Due to the prospective exclusion of pure biobank collections, a lower dispersion of the individual values can also be expected for the future.

*The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

Comments:

As in the previous year, all centres easily meet the minimum requirement of 60 primary surgical cases. Despite a further decline in the median, which is often observed with the increasing establishment of a certification system, the overall picture is stable. The number of primary surgical cases shown in the annual report increased by 3.93%.

6b. Biopsy

Comments:

The number of biopsies increased quite significantly by 16.15% compared to the previous year. The spread of the individual values has increased further. Since there is no target for this indicator, there are no explanations from the centres as to the reasons for these differences.

7a. Revision surgeries

Comments:

The two centres outside the plausibility limits had no or only one revision procedure below the lower plausibility limit of 1%, i.e. they had an extraordinarily low revision rate. These excellent results could be confirmed with populations of 120 and 106 primary surgical cases in the audits. Overall, the revision rate is at a consistently good level.

The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

*** For values outside the plausibility limit(s), the centers are required to provide a justification.

7b. Clinically symptomatic secondary bleeding

Comments:

Similar to indicator 7a, the 5 centres outside the plausibility limits show extraordinarily good values, in this case related to clinically symptomatic rebleeding. Even after checking the values, the audits showed that 3 of these centres had no post-operative bleeding and 2 only one. The overall post-bleeding rate also decreased slightly, both on average and in the median.

The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

*** For values outside the plausibility limit(s), the centers are required to provide a justification.

Comments:

Both the median and the upper percentage ranges show further improvements compared to the previous year. Here, too, 13 centres stood out with particularly good values of less than 1%. These are often the result of many years of efforts by the centres to optimise surgical procedures and regular evaluation of the indicators.

The median for numerator and denominator does not refer to an existing center, but reflects the median of all numerators of the cohort and the median of all denominators of the cohort.

** Percentage of total patients treated in centers according to the numerator.

*** For values outside the plausibility limit(s), the centers are required to provide a justification.
